## Environmental aspects, goals and objectives

### 1. Overview

Finnester Coatings Oy's waste management complies with the laws and local regulations regarding waste management. Especially significant are Chemical Act and Regulations, so called VOC-regulation of Government "Limiting the emissions of volatile organic compounds due to the use of organic solutions in certain activities and installations."

The company's Environmental Management System meets the requirements of ISO 14001: 2015. The environmental aspects, goals and objectives of Sections 4, 5.2 and 6.2 of the Standard are described in this Code of Conduct. The issues identified in this guidance and the overall waste management situation are monitored through management reviews and internal audits.

### 2. Environmental Aspects

Finnester Coatings Oy focuses on flexible manufacturing of coating products. The following environmental issues have been documented:

- The production is located in an industrial area and the activity is subject to environmental permit and related permit conditions.
- Chemicals are used in production.
- As the business expands, the plan is to utilize contract manufacturing so that the environmental load at the current location will not increase.
- Only companies that are responsible for environmental protection are selected as subcontractors.

Production generates waste and its further processing causes environmental load.

- Annual follow-up reports are filed in company's network
- Environmental observations are addressed in weekly meetings

### 3. Environmental goals and objectives

In accordance with Environmental Policy, Finnester Coatings Oy aims to reduce the amount of waste generated and to recycle everything economically and technically possible. The main objectives are:

- In all activities, the aim is to use so-called best available technology (BAT), in particular from an environmental point of view, within the technical and economic context
- The measurements and other obligations required by the environmental permit are properly handled.
- To prevent the generation of waste, especially hazardous waste, in advance.
- Sorting and recycling of waste is carried out as efficiently as is economically and technically possible.
- Increasing the share of recyclable waste and reducing the amount of waste going to landfill.
- Efficient waste management maintains environmental order, cleanliness, work safety and energy efficiency.
- Waste management is a part of improving the corporate image towards customers and stakeholders.
- Noise levels are kept to a minimum, both indoors and outdoors.
